

Patient Health Questionnaire-9

Introduction

The Patient Health Questionnaire (PHQ) is a self-report version of the Primary Care Evaluation of Mental Disorders (PRIME-MD) diagnostic tool for common mental disorders. The PHQ-9 is a brief, 9-item scale that includes only the depression-related items from the PHQ. The PHQ-9 has been validated for use in primary care settings and can be used to make a tentative diagnosis of depression and to monitor depression severity and response to treatment in the past 2 weeks.
